Press Release

Custom Data Processing, Inc. and ezEMRx Announce Mass Vaccination Updates to the ezEMRx Electronic Health Record Software

Key Facts

- Mass vaccination updates added to the ezEMRx product suite
- Updates are in place just in time for distribution of COVID-19 vaccinations

CHICAGO, Ill., December 11, 2020 – Custom Data Processing, Inc. (CDP) and ezEMRx, both Illinois companies who work in partnership, have released an updated mass scheduling feature as part of the ezEMRx electronic health record and practice management software.

The update includes a rules engine that associates vaccine batches with events, manages the distribution and inventory as doses are administered. The mass scheduling feature allows health departments to set up community vaccination drives and groups based on demographics.

A patient can self-register online and is issued a unique QR code that is used to track attendance and flow through the event.

This feature is being released just in time to prepare for distribution of the COVID-19 vaccine in the coming months.

Of his company's response to the pandemic, ezEMRx Chief Technical/Executive Officer Siri Kumar said, "Addressing Health IT is our responsibility toward the community. We all need to do our part and in a short span ezEMRx is now enabled to address needs of testing and vaccination drives. It is critical for the COVID-19 vaccine to be distributed, tracked and managed to counter the growing pandemic. We have now enabled health departments and community systems to address such complex needs."

CDP's Director of Sales and Marketing, Mike Peth said, "Our goal was to create functionality to help our public health clients manage the expected high volume of COVID-19 vaccinations. Its early acceptance has showed we hit the mark."

The ezEMRx electronic health record software was designed for the needs of public health and is available exclusively to public health departments through CDP, which provides hosting, implementation, training, and support services. Together, these companies provide unbeatable public health electronic health records software and services.

For more information about the ezEMRx electronic health record or to schedule a demo of the software or this new feature, contact Mike Peth, Director of Sales and Marketing at CDP, at (800) 888-6035

About CDP

Custom Data Processing, Inc. (CDP) has been providing electronic health solutions to federal, state and local health organizations since 1979. CDP's highly agile, custom, software solutions, built around core system components, are continuously enhanced based on industry trends and client feedback. These solutions have been implemented in more than a thousand locations throughout the United States. CDP has three separate offerings for WIC programs, including management information solutions (MIS), electronic benefits processing (WIC Direct) and a data warehouse tool (Data Direct). Additional offerings include an environmental health application, electronic health records, and networking services. For more information about CDP, visit www.cdpehs.com.

Follow CDP on Twitter (@CDPEHS).

About ezEMRx

ezEMRx was founded in early 2000s with a simple goal: save providers time. The core goal of healthcare is to spend as much time as possible with the patient, not paperwork. This essentially drives usability, which is the premise from which ezEMRx was born. ezEMRx is designed to bring the best technology to healthcare. They are healthcare technologists with one mission, to help providers provide faster and easier care to patients in a quantitative and qualifiable manner. ezEMRx is designed to adapt to all types of health departments and community health systems.
